

REACT FASTER AND SMARTER TO RISKS AND OPPORTUNITIES

**DISCOVER HOW COMPUTACENTER AND CISCO'S INNOVATION CENTER
CAN BOOST VISIBILITY AND AGILITY ACROSS YOUR IT ECOSYSTEM**

**Accelerate problem resolution.
Pinpoint performance improvements.
Create exceptional experiences.
Computacenter and Cisco's Innovation
Center will help you tackle today's
challenges and seize tomorrow's
opportunities by providing a real-time
window into your digital enterprise.
Right there – on the screens – in the room.**

The Innovation Center brings together in a live environment more than 30 leading-edge technologies to reveal the strengths and weaknesses of your digital services and platforms. It isolates the bottlenecks. It identifies the security threats. It reveals the insights needed to enable future success.

The Innovation Center features six showcases that are aligned to common business challenges and goals – from enriching digital interactions and enabling remote working to simplifying operations and optimising costs.

Every showcase is unique to your organisation, its goals, processes and systems. And every showcase will help to ignite the innovation spark. It's a real-time hands-on experience which is hosted in the room, or virtually for those who can't attend in person.

Our Innovation Center won't just unlock new ideas, it will unlock the full digital potential of your organisation.

DISCOVER THE ART OF THE POSSIBLE WITH OUR INNOVATION CENTER SHOWCASES

Securing your mobile workforce

People need to be empowered to work anytime, anywhere. We look at the best ways to provide a consistent digital experience across different devices and channels without impacting user productivity or data security.

Protecting your digital business

In a world of rising cyber threats, we reveal how attacks can be detected and isolated before they impact your organisation's revenue and reputation. We help to pinpoint – and plug – the gaps in your digital security controls.

Achieving intelligent connectivity across your organisation

Growth strategies, hybrid working, digital roadmaps: they all require reliable and scalable connectivity. We explore how you can optimise network performance and security to increase resilience and adaptability.

Dynamically managing your workloads in the cloud

Greater use of the cloud can result in greater complexity and cost. We look at how workloads can be migrated and managed more effectively to optimise not only service levels but also operational costs.

Enabling full stack observability

We break down system silos and expose interdependencies to provide 360-degree visibility of your digital services. From employee apps to customer portals, we unlock the actionable insights needed to deliver greater performance and richer experiences.

Automating IT across your technology stacks

The business landscape is constantly evolving, and manual IT processes can delay the pace of change. We reveal how automation and orchestration can fast-track the deployment of new networking and security capabilities without compromising quality.

BUILD THE FOUNDATIONS FOR FUTURE SUCCESS

- ✓ Boost efficiency and agility
- ✓ Safeguard revenue and reputation
- ✓ Reduce risk and complexity
- ✓ Enrich customer experience
- ✓ Enable flexible and collaborative workstyles
- ✓ Maximise return on digital investments
